

Identifying risk indicators for illicit timber shipments

TAO Zhiqiang Global Programme for Combating Wildlife and Forest Crime United Nations Office on Drugs and Crime

15 November 2018

What is risk

Risk is the likelihood of a harmful event occurring and the impact of the event if it were to occur.

(Risk = Likelihood x Impact)

Risk Assessment

How vulnerable the subject is to an undesirable event (a Threat), expressed in terms of Likelihood and Impact.

	Risk			Impact		
	Matrix	Negligible	Minor	Moderate	Severe	Critical
L I	Very Likely	Low	Medium	High	Very High	Unacceptable
K E	Likely	Low	Medium	High	High	Very High
I	Moderately Likely	Low	Low	Medium	High	High
H O O	Unlikely	Low	Low	Low	Medium	Medium
D	Very Unlikely	Low	Low	Low	Low	Low

Risk assessment

- Risk assessment is a continuous process
- It includes the following elements:
 - > Threat/hazard identification
 - > Evaluation of likelihood and country prioritisation
 - > Impact assessment, preparation and profiling
 - > Targeting
 - ➤ Management of the risk (e.g. physical control, x-ray scanning, detector dogs, etc.)
 - > Evaluation of outcomes and controls

Why is it important?

- Globally >680 million shipping containers are transporting 90% of the world's cargo every year
- Some are used to smuggle illicit goods (weapons, drugs, timber, wildlife, etc.)
- Less than 2% of containers are examined
- ASEAN region progressing towards greater connectivity and integration
- Freer movement of people and goods across borders also means increased opportunities for transnational crime
- Greater Mekong countries share 12,000 km highly porous, inadequately controlled land borders

Risk assessment helps to target the selection of shipments for inspection, to increase detection of illicit goods

Key sources of information to develop risk profiles

- Available import, export and transit data
- National or local control database
- Seizure reports
- Strategic, Tactical or Operational Reports from other law enforcement agencies
- Intelligence data
- Information exchange with other customs administrations
- Risk information from other law enforcement agencies
- Cooperation with trade stakeholders in the supply chain (e.g. carriers, customs brokers, freight forwarders, port authorities, etc.)
- Transport documents such as manifests, airway bills, etc.

Seizure analysis

- Analysis of national, regional and international irregularities and seizures is important
 - > It identifies where law enforcement has been successful
 - ➤ Sharing seizure information with other law enforcement authorities is important to be informed of the latest smuggling trends
 - ➤ It can help to recognise where there may be weakness in law enforcement systems
- Seizure analysis can be used to start developing risk profiles, which can be refined and improved over time

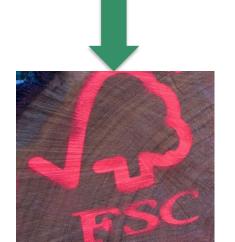

Fraudulent use of timber certification trademarks

Fake FSC trademark
(Appears fake, also missing the license number)

FSC website has searchable database of certified companies and FSC license numbers to assist with verification

Genuine trademark

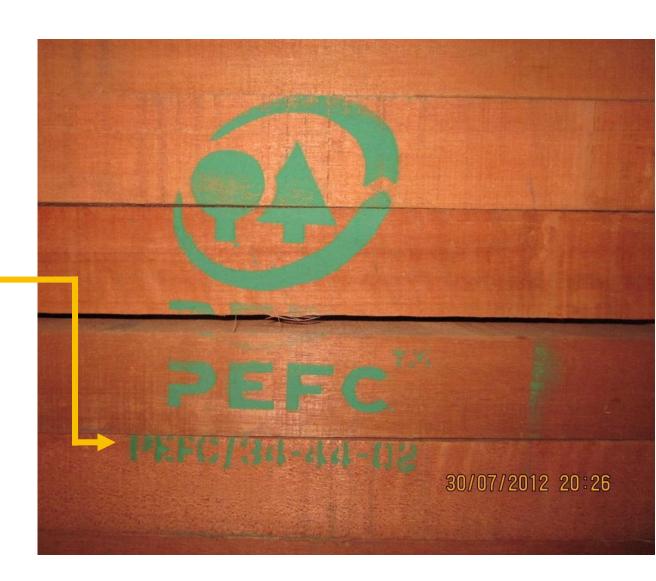

False use of PEFC trademark

(Fake license number)

PEFC website also has database of licensed PEFC certificate holders for verification

Use of counterfeit/ fraudulent CITES permits

- Checking and validating CITES documents at the border is one of the most important parts of CITES
- Most CITES fraud takes place in shipments accompanied with permits
- For example: Invalid date; fake security stamp; forged signature; permit does not correspond with actual traded specimens; etc.

Illegal timber hidden among legal timber

Example case:

- Shipment declared as FSC meranti (Shorea spp.

 not CITES listed) white primed skirtings from Indonesia to Netherlands
- 6 crates of skirtings, all painted white
- Shipment also appeared to contain Ramin (Gonystylus spp. - CITES App. II)

- No CITES permit was presented
- Ramin was seized
- Importer was prosecuted

Mixed shipments with other illicit commodities

 Timber can be used as the cover load for concealing other illicit products

Example:

- January 2014 seizure made by Customs at Lome Port, Togo
- Shipping container destined for Vietnam
- Contained 124 teak logs, 1689kg ivory

Use of other names / incorrect names

- Timber is mis-declared under another species name, a local trade name, or as mixed wood
- Use of incorrect tradenames
- Use of incorrect scientific names

- Resources to help check species names:
 - CITES Species database (www.checklist.cites.org)
 - Species + database (www.speciesplus.net)

Other modus operandi

- Mislabelled packaging
- The identifying features of timber are concealed by painting, varnishing or staining

Pallets or packing material is made from restricted timber

species

Considerations during administrative examination

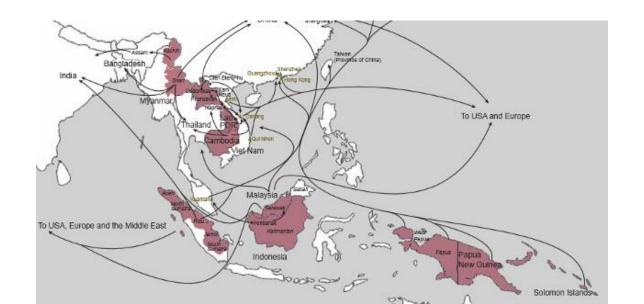

- Examine all available documents:
 - ➤ CITES permits import and export permits should mirror each other
 - ➤ Airway bills & shipping bills crosscheck importer/exporter details
 - Customs commercial invoices crosscheck importer/exporter details; check species declared
- Are any documents missing?
- Are all documents authentic?
- Is all information consistent between documents?

Risk indicators: Routing

- Shipment is from a high-risk origin/transit country
- Use of unusual/complicated routing
- Time of day / day of the week/ port of entry used
- Does it make economic sense? Legitimate business will always use the most efficient and economical route

Risk indicators: Declared goods

- Declared goods are not consistent with type of business of consignee/consignor
- High shipping costs for declared low value consignment (shipment is not economically viable)
- Shipment is a heavier (or lighter) weight than is normal for the declared goods
- Description of goods on the shipping documents does not match Harmonized Systems (HS) code (e.g. using HS code with lower rate of customs import duty)
- Declared goods are known to be used as cover materials for smuggled goods (e.g. scrap plastic, tea, coffee beans, fish, handicrafts, etc.)

Importer/exporter (consignor/consignee)

- Incomplete/false company names/addresses
- Fraudulent use of genuine company details
- P.O Box or hotel/ suite/ apartment address is listed
- Mobile phone number listed as contact point
- Loading/destination ports used should be consistent with consignor/consignee address
- Importer/exporter is recently established
- First time importing/ exporting
- Check for any known adverse compliance history (of any parties involved – importer, exporter, transporter, logging company)

High-risk industries for certain timber species

- Antique restoration
- Ships and yachts
- Musical instruments (rosewood)
- Furniture
- Wood carving
- Flooring
- Perfumery (agarwood)

Risk indicators

eg. CITES permits

- Validity date expired or been altered
- Source code is incorrect or unfeasible
- Appendix number is incorrect or unfeasible
- Customs export endorsement is missing or incorrect
- Security seal (if there is one) must be in contact with signature and/or security stamp
- Document does not match actual shipment in terms of species/ quantity/ weight
- Scientific name is false or incorrect
- False declaration of origin (e.g. artificial propagation, plantation timber)
- Signs of document fraud: forged signature, signs of alteration, incorrect document format, incorrect CITES logo/position
