

MRV, MULTIPLE BENEFITS & GOVERNANCE: KEY ISSUES FOR REDD IMPLEMENTATION

Tuesday, 9 June 2009
1:00pm - 3:00pm
Solar Room, Ministry of
Environment, Bonn
Lunch will be provided

Speakers

Peter Holmgren, Director, Environment, Climate Change & Bioenergy Division, FAO

Barney Dickson, Head of the Climate Change & Biodiversity Programme, UNEP-WCMC

Rosalind Reeve, Forest Campaign Manager, Global Witness & Laura Furones, Regional Manager for Latin America Forest Team, Global Witness

Charles McNeill, Senior Policy Advisor, UNDP

Monitoring systems that will allow credible and affordable Measurement, Reporting and Verification (MRV) of REDD performance are critical for successful implementation of any REDD scheme. Many countries are in the early phases of designing such systems by preparing and testing technical methodologies for accurate measurements, including field measurements and remote sensing, to enable monitoring of emissions from forests and land use.

MRV requirements under REDD are about trends in emission levels and therefore concern the stock and flows of forest carbon. Specific MRV requirements will be determined through the UNFCCC process, building on IPCC guidelines. Additionally, for REDD to be successfully delivered by countries, alignment with national development contexts is needed to address synergies and trade-offs among multiple benefits (including livelihoods, biodiversity and ecosystem services).

The aim of the event is to support countries in developing appropriate institutional and governance mechanisms to operationalize MRV systems. Speakers will also describe ongoing work of the UN system on multiple benefits beyond carbon. Implementation issues at the national level including institutional capacities will be explored. The CSO speakers will address the governance and independent monitoring aspects of MRV for REDD.
